

Specification Sheet CB01 Cable Lockouts

CB01 Lockout cables provide an effective lock out solution for all manner of gate valves, handles and oversized equipment, to ensure that all energy sources are secured in the 'off' position while essential inspection and maintenance is undertaken. They are particularly effective for safely locking out a series of valves in one operation. The CB01 are supplied with a flexible and durable multi-strand stainless steel cable with an insulating clear plastic covering. Lockout cables are produced in a 2m length as standard, but are available with any custom length required, depending on your particular requirements. They have high resistance to corrosion, high temperatures and chemical degradation.

<u>Material</u>	Industrial resin body / insulation coated stainless steel cable (PVC free)
<u>Applications</u>	Lockout of many types of industrial valve (such as gate valves), handles and other large devices and equipment
<u>Cable Diameter</u>	4mm and 6mm diameter options available (model CB01-4 & CB01-6)
<u>Features</u>	Upto 4 lockout padlocks can be used in the device body for multiple lockout applications. CB01 features highly visible, re-usable, write-on safety labels
<u>Customisation Options</u>	Custom length cable option, and custom device colours available
<u>Available Colours</u>	Red as standard- other colours upon request (minimum orders may apply)
