

## Specification Sheet

# Ferrule Sealing Pliers

Our ferrule sealing pliers provide an effective method of securely crimping 6-12mm sealing ferrules onto galvanised wire, for use as a security seal in **meter and utility industries**.

The pliers incorporate a **ratchet design** for easy operation and generate sufficient sealing strength to **securely crimp ferrules** without slippage. They feature an ergonomic design and can be held in one hand for easy operation. Dies can be customised with **upto 3 characters** on each side of the jaw, to uniquely identify the organisation and operator to whom the ferrules were issued. In the UK, the pliers are available only to signatories to **MOCOPA**.

### Applications

For sealing of cylindrical ferrules onto galvanised sealing wire, as a security seal on gas, water and electrical meters. Suitable for MOCOPA applications.

### Features

Ratchet design for high sealing strength (upto 350N pulling-strength resistance with two-handed application). Ratchet release mechanism for incorrectly sited ferrules, ergonomic design and fully-customisable dies.

### Construction

Steel and plastic construction, 220mm in length (including handles)

### Available Colours

Black jaws and grey handle only.

### Customisation Options

6mm or 12mm size options

Upto 3-character customisation per jaw
